Docket No.: YOR920010446US2

Confirmation No. 3116

## **IN THE ABSTRACT:**

Please amend the Abstract as indicated below:

technique that begins by creating small solid motifs and continues to create larger motifs that include "don't care" characters and that can include flexible portions. The small solid motifs, including don't care characters and flexible portions, are concatenated to create larger motifs. During each iteration, motifs are trimmed to remove redundant motifs and other motifs that do not meet certain criteria. The process is continued until no new motifs are determined. At this point, the basis set of motifs has been determined. The

Basis motifs are determined from an input sequence through an iterative

basis motifs are used to construct redundant motifs. The redundant motifs are formed by determining a number of sets for selected basis motifs. From these sets, unique

intersection sets are determined. The redundant motifs are determined from the unique

intersection sets and the basis motifs. This process continues, by selecting additional

basis motifs.
